Dietary Intakes/Exposure Assessment

Amount brought by each food	=	Amount Consumed (g/day)	X	Occurrence data (µg/g)	=	Body weight (kg)	=	Intake / Exposure (µg/kg/day)
Overall Diet {  +  +  +  + 	=	141,9	X	0,0093	=	/ 65	=	0,020
	=	198,4	X	0,0009	=	/ 65	=	0,003
	=	191,5	X	0,0076	=	/ 65	=	0,022
	=	541,4	X	0,0025	=	/ 65	=	0,021
	=	315,0	X	0,0007	=	/ 65	=	0,003
Total							=	0,070 (µg/kg/day)

Overview: Types of Food Consumption Data – Pros and Cons

Méthods	Data	Consumption Estimates	Food Chain Level	Drawbacks
Population-based methods	<ul style="list-style-type: none"> <input type="checkbox"/> Food Balance Sheets <ul style="list-style-type: none"> ▪ Total food available for consumption as a physical residual in the market. ▪ Total supply = total demand <input type="checkbox"/> Time scale: year 	<ul style="list-style-type: none"> <input type="checkbox"/> Median, mean 	<ul style="list-style-type: none"> <input type="checkbox"/> Raw, semiprocessed products 	<ul style="list-style-type: none"> <input type="checkbox"/> No information on distribution of consumption <input type="checkbox"/> No information on individual exposure and subgroups at risk <input type="checkbox"/> High level of uncertainty
Household-based methods: Always available, generated on a regular basis by national institute of statistics	<ul style="list-style-type: none"> <input type="checkbox"/> Purchase or expenditures records <ul style="list-style-type: none"> ▪ Values and quantities of food purchased, own produced and received at household level <input type="checkbox"/> Large sample size <input type="checkbox"/> Time scale: weeks 	<ul style="list-style-type: none"> <input type="checkbox"/> Mean <input type="checkbox"/> High Percentile 	<ul style="list-style-type: none"> <input type="checkbox"/> Raw, semiprocessed and processed products 	<ul style="list-style-type: none"> <input type="checkbox"/> No intra-household distribution <input type="checkbox"/> Not individual food intakes <input type="checkbox"/> Food eaten outside home difficult to capture
Individual-based methods	<ul style="list-style-type: none"> <input type="checkbox"/> Food record survey <input type="checkbox"/> 24-hour recall survey <input type="checkbox"/> Food frequency questionnaire <input type="checkbox"/> Meal-based diet history survey <input type="checkbox"/> Food habit questionnaire <input type="checkbox"/> Small sample size <input type="checkbox"/> Time scale: days 	<ul style="list-style-type: none"> <input type="checkbox"/> Mean <input type="checkbox"/> High percentile 	<ul style="list-style-type: none"> <input type="checkbox"/> Raw, semiprocessed and processed products 	<ul style="list-style-type: none"> <input type="checkbox"/> Expensive, time and resource consuming <input type="checkbox"/> Susceptible of under- or over reporting

Stepwise Approach For Dietary Intakes/Dietary Exposure Assessments ⁶

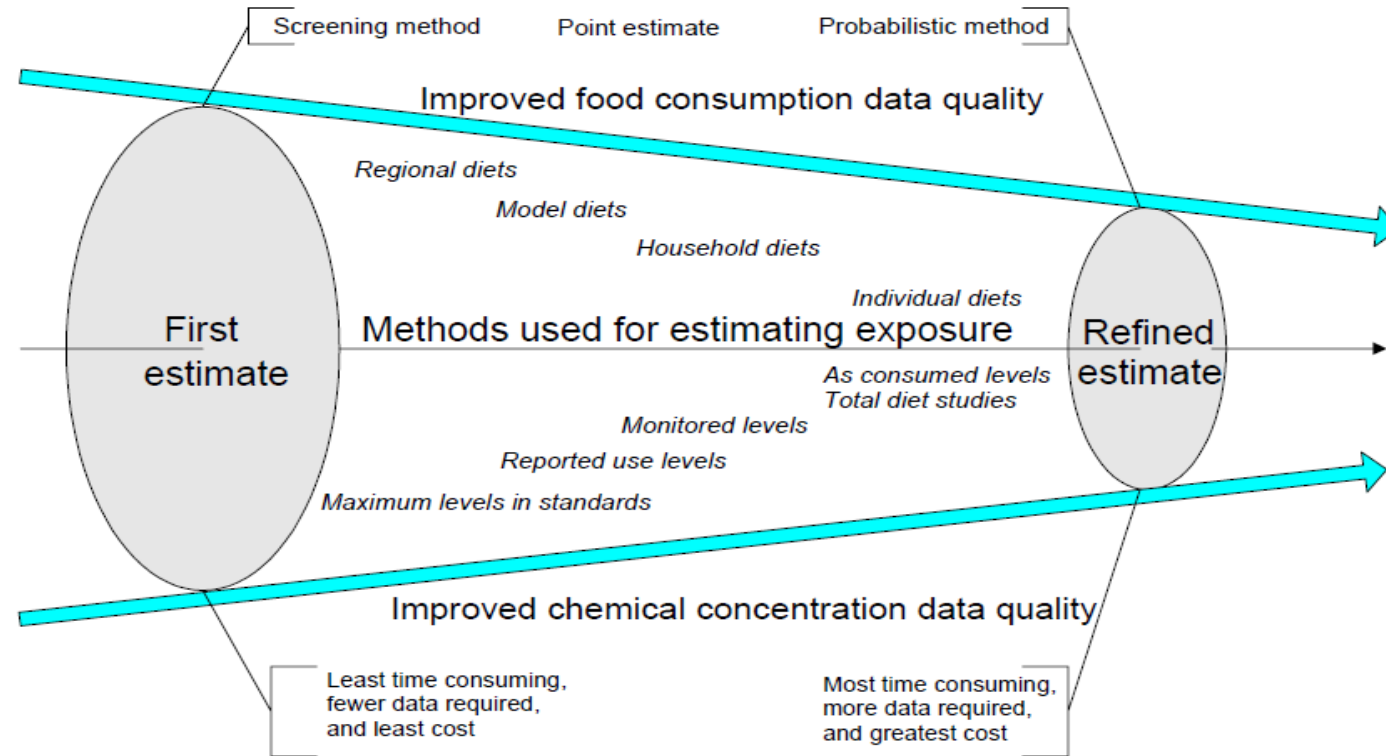

Figure 1 Stepwise approach to obtaining realistic dietary exposure assessments

Note: Data and methods selected from the right-hand side of the diagram are likely to result in a more realistic dietary exposure estimate or "refined estimate"; however, it may not be the "refined estimate" in terms of the "most appropriate" one to suit the purpose of a specific dietary modelling exercise.

Database available : Based on *per capita* data submitted to FAO/Stat (Consumption by year) <http://faostat3.fao.org/faostat-gateway/go/to/home/E>

Per Capita Consumption: GEMS/Food Cluster Diets ⁸

Based on FAO Food Balance Sheets

Average per capita consumption:

- <http://www.who.int/foodsafety/chem/gems/en/index1.html>

Used for long term dietary exposure assessment

1989: Five regional diets

1997: Thirteen cluster diets

2012: Review of the cluster diets based on new statistical approach

- Non-negative Matrix Factorization

**Food and Agriculture
Organization of the
United Nations**

Average vs. High Consumption

- ❑ Within a risk assessment process, mean consumption levels are often not sufficient
- ❑ It is fundamental to consider also non-average individuals, in particular **high consumers**
 - Those who consume relatively large quantities of foods

Short Term Exposure

- ❑ Based on National individual food consumption data submitted to GEMS/Food
- ❑ Consumption during a day or an eating occasion
- ❑ Generally 97.5th percentile for consumers only
- ❑ Necessary to check the number of consumers

Target Populations

Adult population

Pregnant women

Small children

Infants

Elderly

Special groups:
vegetarians, diabetics,
ethnic groups and
different socio-economic
strata ...

Apple Juice Consumption
